

The delivery is not lost. The information is.

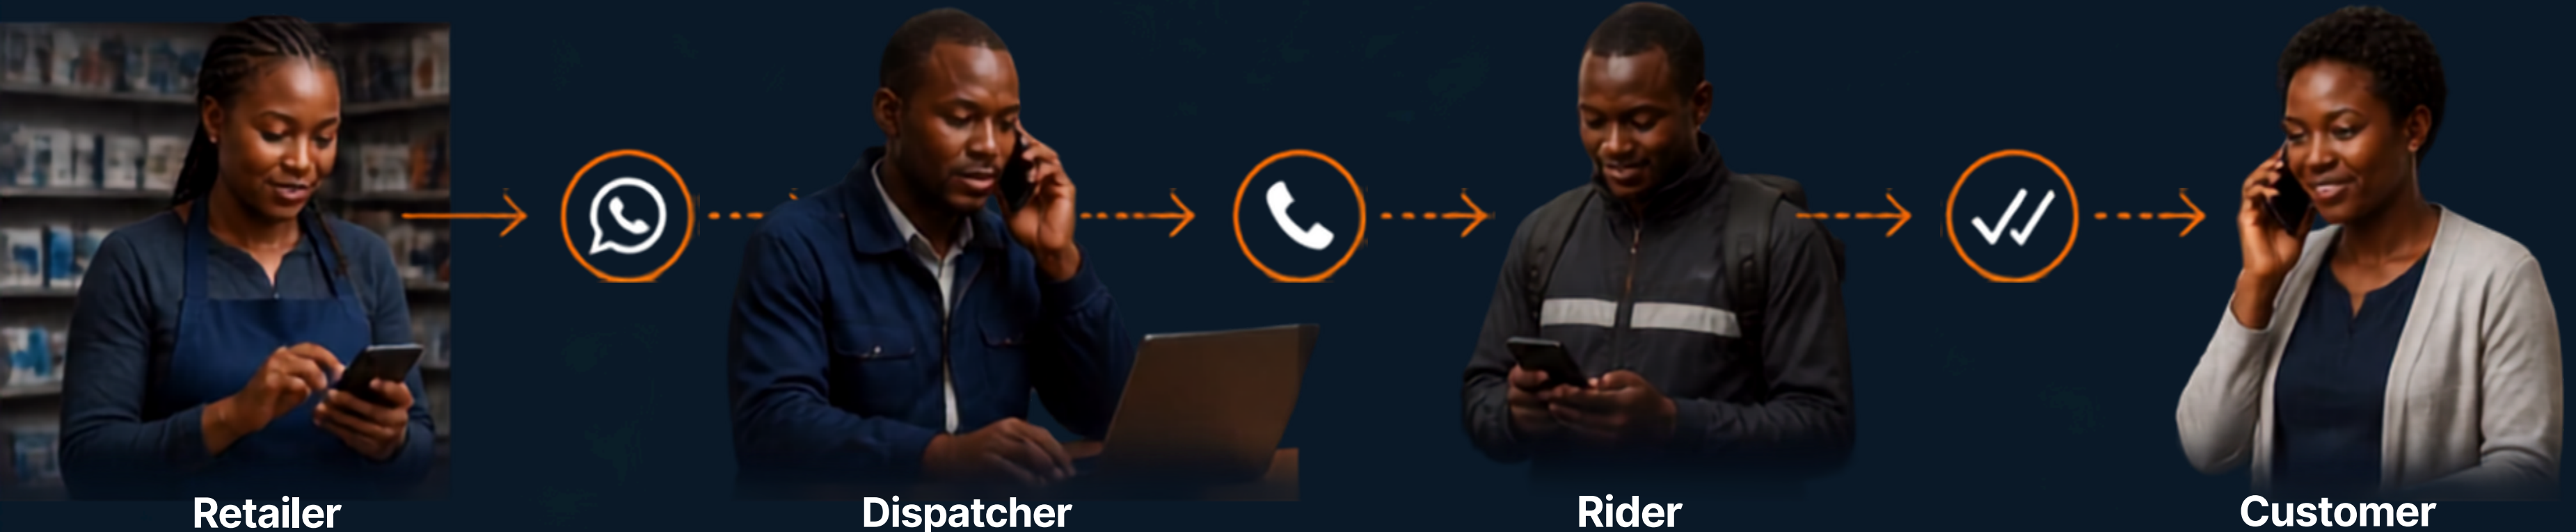

Small Kenyan businesses rely on WhatsApp and phone calls to coordinate deliveries. When information is fragmented, delays happen, customers lose trust.

No clear assignment ownership

Status updates need repeated follow-ups

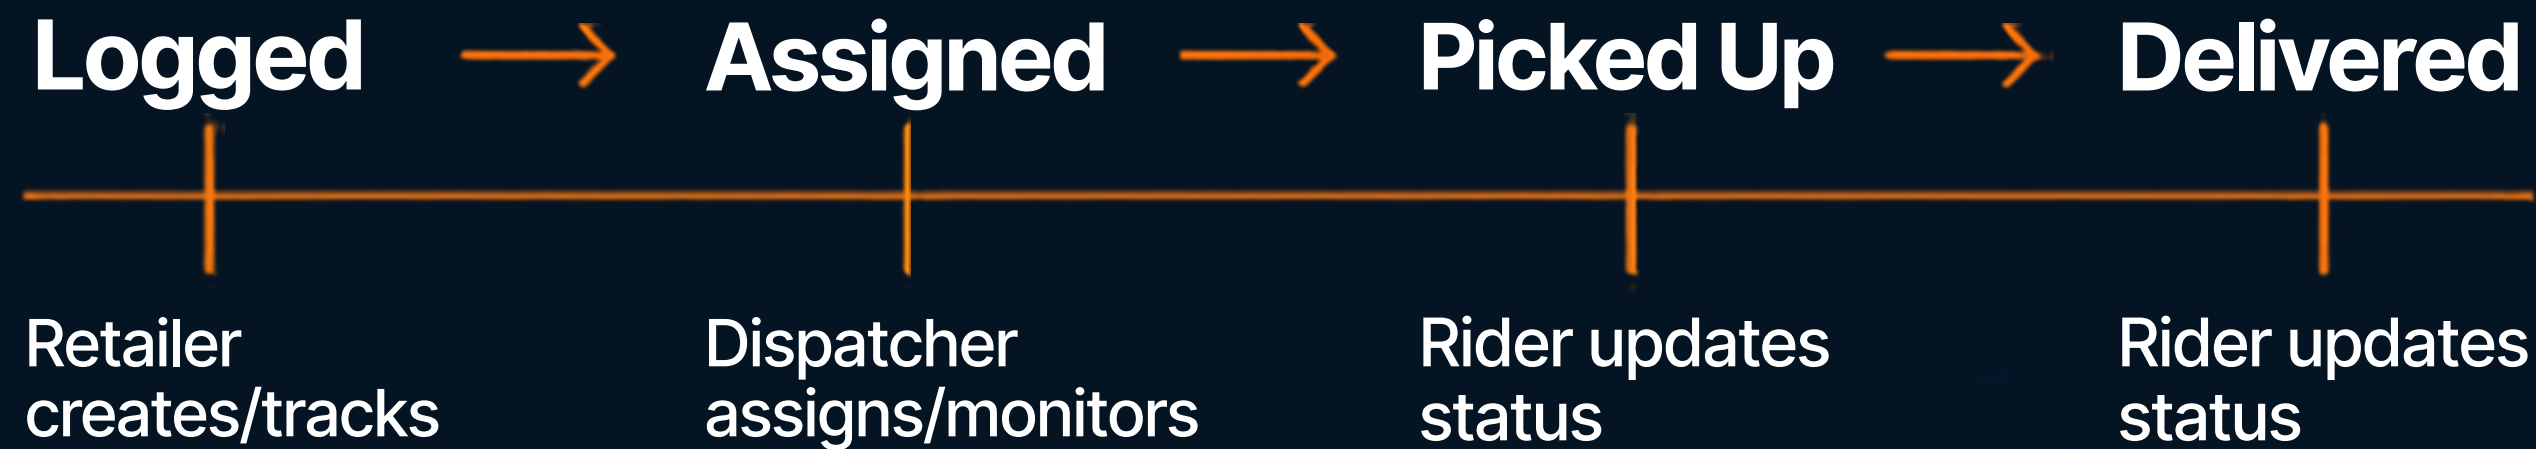

Proof of delivery is hard to verify

Address details and landmarks
get lost in messages

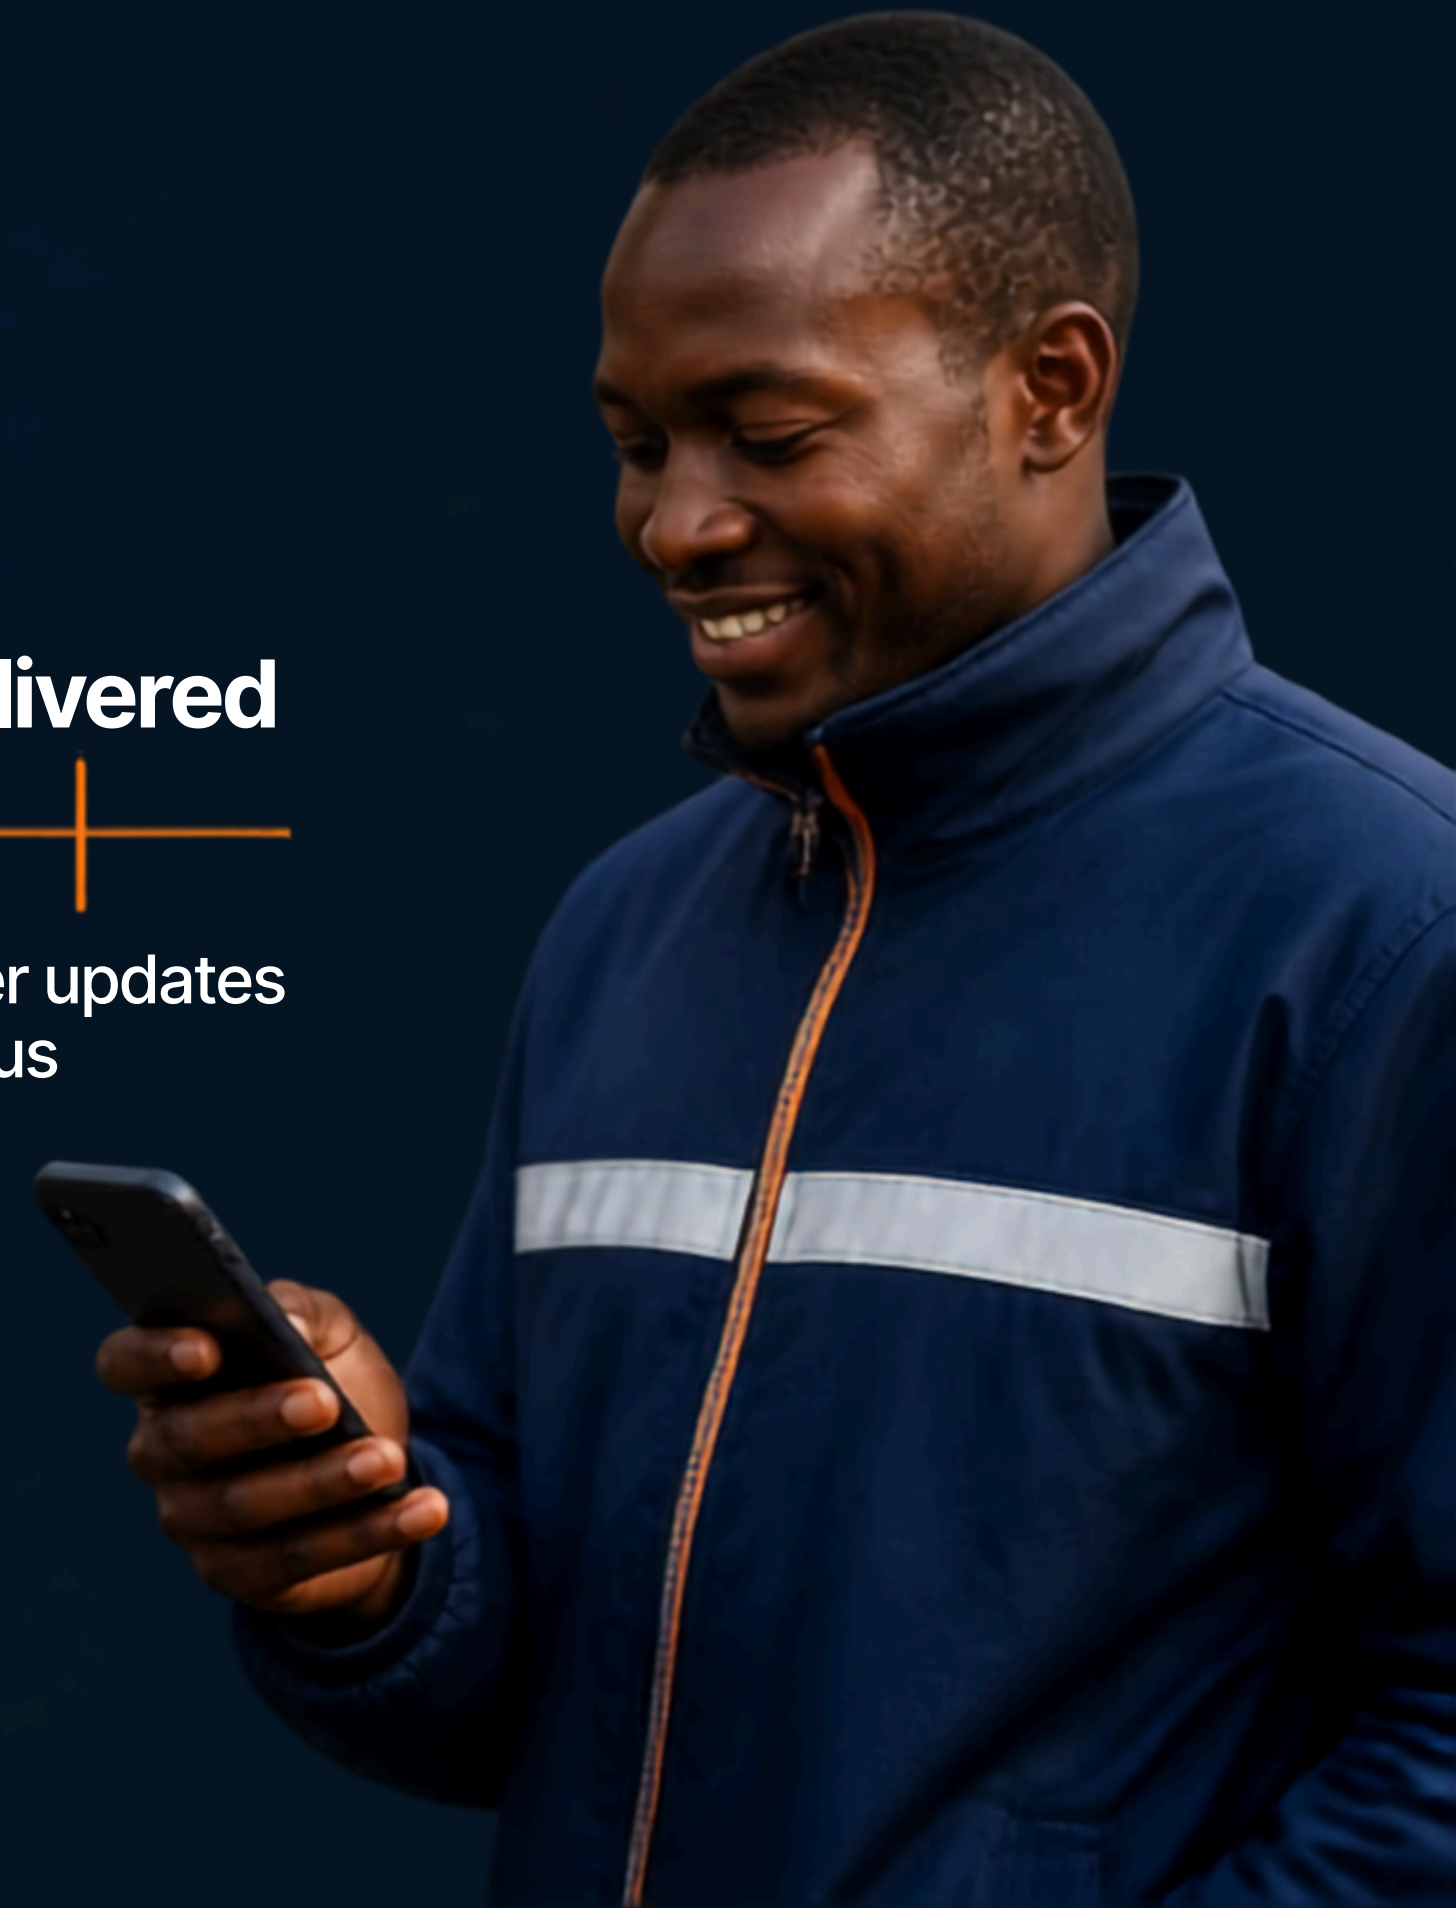

Key takeaway: fragmented delivery information disrupts businesses and customer confidence.

One shared record for **every** delivery.

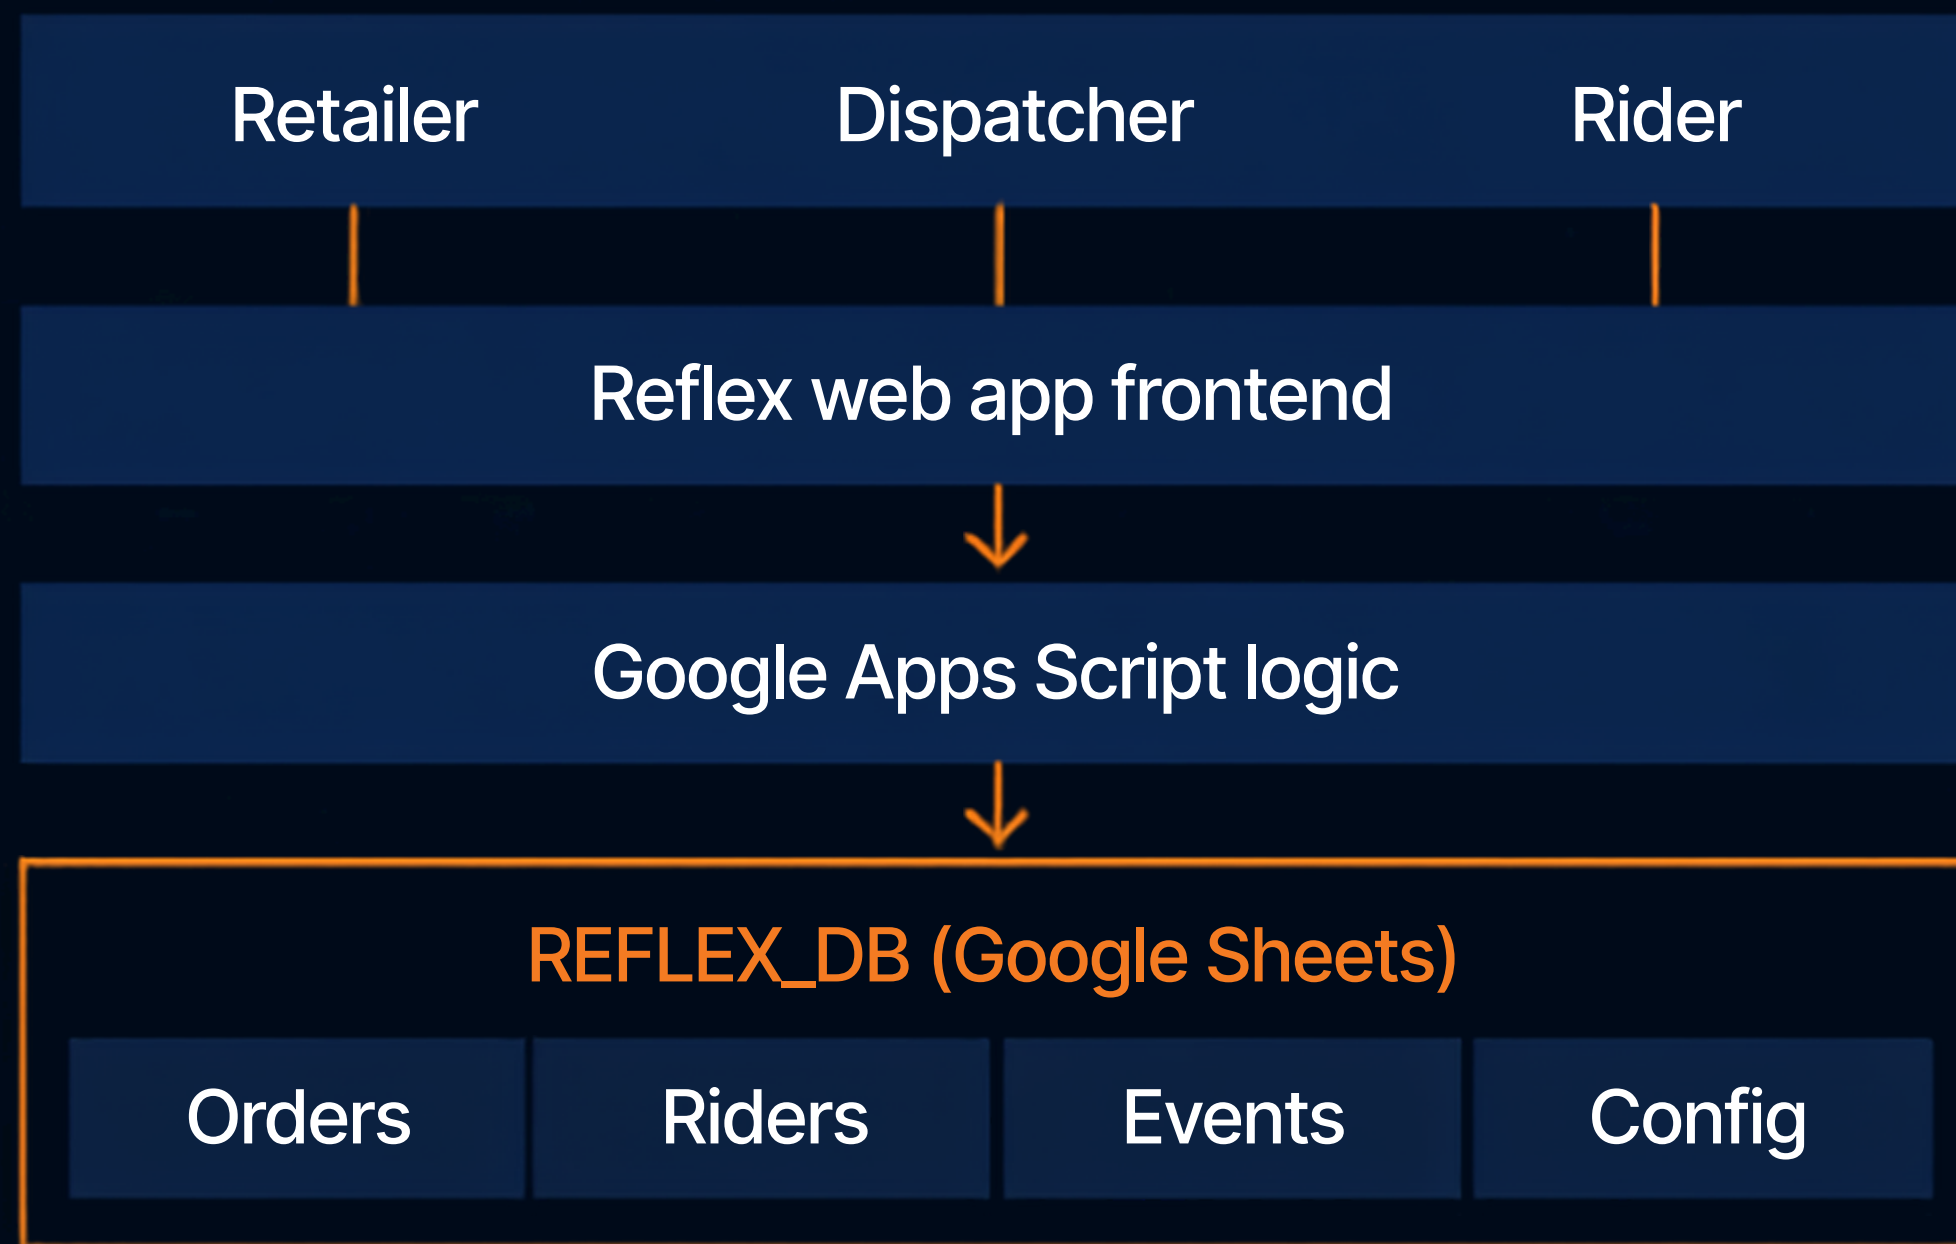

Reflex works with the channels you already use. It does not replace WhatsApp. It gives your deliveries a **memory**.

Reflex creates transparent, shared delivery visibility without changing how you communicate.

Simple infrastructure is enough to **prove** the operating model.

Role-specific browser views with **HTML, CSS, JavaScript**.

Apps Script handles **validations, state transitions, assignments**.

Google Sheets stores structured **prototype data**.

Events log actor, timestamp, actions, and **sync status**.

Browser local queue supports temporary **offline rider updates**.

We optimized for a reliable MVP, **not** imaginary scale.

Google Sheets

Fast setup
and debugging

Lacks full transaction
and concurrency
guarantees

Five-second polling

Simple near-real-time
updates

Not instant or
event-driven

Browser queue

Demonstrates
offline handling

Limited durability
and conflict
resolution

Simplified authentication

Enables quick demo
role switching

Not production-grade
security

Each trade-off was a deliberate choice balancing **speed, clarity, and demonstrability**.
Known concurrency edge cases like simultaneous assignments require **future handling**.

MVP trade-offs are transparent and have clear Phase 2 upgrade paths.

Prove the workflow first, then **strengthen** the infrastructure.

1

Phase 1

MVP

Quickly prove the core workflow.

Delivery creation, assignment, status tracking,
offline queue, event logging.

2

Phase 2

production hardening

Make it reliable and secure.

Managed database, secure authentication, offline
durability, conflict handling, notifications.

3

Phase 3

logistics intelligence

Unlock operational advantage.

Route optimization, ETA prediction, analytics,
multi-retailer support, integrations.

Reflex's future growth focuses on **robustness** before advanced logistics capabilities.
